FOREWARD

The fiscal year ending June 1982 was characterized by initiatives on the part of the State Board of Education toward even more quality education in Maryland. These included initiatives to produce better teachers, better high schools, better guidance services, and better special education programs.

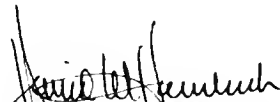

We are satisfied that we have chosen the right paths to quality education and satisfied, also, with the progress made in 1982 along those paths.

This report includes a summary of the efforts and a statistical review of the year's activities.

The statistical section is comprised of pertinent statistics on education in Maryland for fiscal year 1982 and is presented according to the following categories:

- o Background Data
- o Pupil Data
- o Staff Data
- o Adult Education Data
- o Vocational Rehabilitation Data
- o Financial Data
- o Maryland Public Library Data

We hope this report will be useful both as a historical record and as a research and information guide to legislators, school board members, and other interested persons.

DAVID W. HORNBECK

State Superintendent of Schools

OVERVIEW:
1981-1982

16th
Annual Report

ANNUAL REPORT OF THE STATE BOARD OF EDUCATION FOR THE YEAR 1982

Project Basic

We are please to report that 90 percent of the entering ninth graders this school year passed the Maryland Functional Reading Test and fulfilled the reading prerequisite. Five years ago only 74 percent of the students in that grade earned passing marks. These new high reading achievement scores for Maryland students are reflected not only on the functional but also on the standardized reading tests. That is good news because it continues to demonstrate the twin objectives of Project Basic: setting and maintaining standards and assuring that students meet those standards.

In June 1982 State Board of Education bylaw COMAR 13A.03.01.04 became fully operative in that all high school seniors were required to have passed the Maryland Functional Reading Test as a prerequisite for graduation.

This year local school systems completed curriculum development for the Arts and Physical Education, another Project Basic area. Twenty-two specific outcomes will become a part of all K-8 students' art and physical education programs. Local superintendents will certify by next year that not only is the program in place but that all students have the opportunity to participate. The program provides accommodations for students with handicapping conditions.

For the fourth year, the Department provided technical assistance staff--Project Basic facilitators--in local school systems to help with the local implementation of Project Basic. The school systems and the Department had as their main tasks the following:

- o Continuing orientation for staff, students, and community.
- o Completing implementation activities in 100 percent of the state's schools.
- o Assisting with test development for mathematics, writing, citizenship, and survival.
- o Phasing in programs for handicapped students.
- o Maintaining recordkeeping.
- o Intergrating the arts and physical education programs.
- o Developing staff in the use of the new reading and mathematics instructional guides.
- o Improving teaching strategies.
- o Assuring appropriate help for students to pass the competency tests.

School Improvement Through Instructional Processes (SITIP)

The Department implemented a school improvement project using four research-based models (Active Teaching, Mastery Learning, Student Team Learning, and Teaching Variables). These models were selected as potentially useful to all schools for improving instruction in all academic curricula and useful to help students who may fail one of the functional tests used as a Maryland graduation prerequisite.

Early returns from schools enlisted in this new program show students gaining a year to a year and a half in test scores over a six to eight month period. We are proud of that accomplishment.

The project used the latest research on how a state agency/local school system/school building

might work together to bring about planned changes to improve instruction and student achievement. The major accomplishments included: a statewide awareness conference for key education leaders using recognized national consultants to discuss each model, commitment and active involvement of local school systems, initial intensive and follow-up training sessions, continuous technical assistance, and assessment of progress and impact.

Local school systems have been quick to see the project's value. At the end of this first year, all of Maryland's 24 school systems are implementing at least one of the model's instructional processes proven to be effective in increasing student achievement. The assessment of progress and impact shows that nearly 700 teachers in grades K-12 are using one or more of the models in mathematics, reading/language arts, science, social studies, or other academic areas. Assessment data indicates that teachers feel comfortable about the model and its application; communication has increased among educational groups (state, local central office, school principal, and teachers); other school leaders expressed great interest in becoming part of the program; and, as noted, gratifying improvement have taken place in student test scores.

The project will continue for another year. Final results will be available in June 1983. However, because of the first year's success and the uniqueness of a plan that puts very new research into practice, the project has received national attention. Publications describing Maryland's program were accepted by ERIC, a national clearinghouse and diffusing source for all quality education publications; the American Educational Research Association plans to make this program an agenda item at its international April

conference; and the Center for Policy Research is reviewing the project as a model for school improvement for the U.S. Secretary of Education. Interest in the project has also been expressed by other researchers, educational organizations, and state departments of education.

Quality Teaching

The Teacher Quality Commission, a 28-member blue ribbon panel, made its report to the Board in October. The Board has under careful study the recommendation of the Commission.

High School Study

In March this Board requested the Department to initiate a reexamination of the principles, standards, policies, and programs that provide guidance for the state's public high schools. It was a logical next step in our efforts. With Project Basic and its focus on minimum graduation competencies nearly in place, it was time to turn part of our attention even more consciously to increasing the rigor and standards of high school education. The Superintendent established the Maryland Commission on Secondary Education and charged the commission to prepare a mission statement outlining goals for the public high schools and to make recommendations in five key areas--graduation requirements and diploma offerings, curriculum, instruction and instructional support services, student services and activities, and school administration.

The 20-member commission of Maryland educators and citizens, chaired by Richard J. Deasy, Assistant State Superintendent for Instruction, began its three-year task in June. The mission paper will be completed in February 1983 and the

graduation requirements recommendations will be sent forward in the fall of 1983. A timetable for examining each of the other areas has been established. The five task forces will assist the Commission by submitting recommendations.

The last comprehensive examination of the Maryland public high school was conducted in the early 1960s.

Special Education

An important shift in emphasis occurred in 1982 in the administration of special education—our principal energies were directed toward program improvement and not, as in the past, toward compliance with the law.

During 1982 Maryland continued to rank near the top nationally in the percent of handicapped students served in the public schools. Nearly 100,000 handicapped children were served in Maryland's public education program last year, a slight decrease from the previous year, consistent with declining public school enrollment.

To enhance locally initiated staff development opportunities, a priority activity, MSDE allocated to each local education agency federal PL 94-142 discretionary funds, ranging from \$5,200 to \$38,600 and totaling \$277,122 statewide. These funds were used to provide special education inservice training. In addition, using \$117,000 of federal Title VI-D funds, Department staff conducted several inservice programs across the state. During the last school year about 12,000 general and special education professionals participated in inservice programs regarding the education of handicapped children. This coming year it is planned that over 17,000 general

education, special education, and related services professionals will participate in inservice training regarding the education of handicapped children. Again this year, the Department conducted an inservice training program for over 30 school principals in areas designed to assist them in performing their special education responsibilities. Training was made available to school psychologists in the assessment of severely and profoundly handicapped children and seriously emotionally disturbed children.

Two additional manuals in the Parent Helper series, Parent Helper, Handicapped Children Birth to Five: Communication and Parent Helper, Handicapped Children Birth to Five: Socialization were distributed. This series was developed to assist parents of handicapped preschoolers with parenting activities. Both publications have proved to be enormously popular with both parents and teachers.

Pilot testing began in three local school systems of a statewide plan to assure the provision of quality services for the birth to three handicapped population.

Department staff has continued active participation on the State Coordination Committee for Services to Handicapped Children (SCC). In cooperation with the Departments of Human Resources and Health and Mental Hygiene, the Committee offered a proposal to establish a new state office to be known as the State Coordination Council for Residential Placement of Handicapped Children (SCC).

The purpose of the office will be to develop and maintain a statewide system of standardizing and coordinating the procedures through which

handicapped children are placed in and returned from residential programs that provide care, treatment, and education.

The SCC proposal has been accepted; the new office was established by Executive Order; and the SCC is currently recruiting staff and developing the initial operational activities. The SCC anticipated implementation of the new procedures on a pilot basis during state Fiscal Year 1984.

Maryland is one of fewer than half a dozen states that provide educational services to handicapped children from birth. There are now over 700 infants between 0 and 2 and 5,000 between 3 and 5 in this relatively new program.

In September 1982, this Board amended COMAR 13A.05.01 by adding Regulation .08, Parent Surrogates. Parent surrogates act as handicapped children's parents in the special education decision-making process when the parents are unknown or unavailable or the child is a ward of the state. The Department has produced a Parent Surrogate training module for use by the local education agencies in recruiting and training volunteers to serve as parent surrogates. To date, 124 parent surrogates have been named.

During this year technical assistance was provided to all 24 LEAs in their development of Project Basic/Special Education implementation plans. In addition, a statewide meeting was held in October as a forum for the LEAs to share their strategies for including Project Basic objectives in special education students' instructional programs.

In Fiscal Year 1982, the Department approved 524 nonpublic placement Level V (day) placements

and 391 nonpublic Level VI (residential) placements, at a total combined state and local cost of \$11,308,793.

Finally, the Maryland Learning Disabilities Project, conducted in conjunction with Johns Hopkins University, is in its third year and currently operating in 100 pilot schools in 11 LEAs. This project is developing and piloting guidelines and resources regarding the evaluation and instruction of learning disabled students. During this past year, LEARNING DISABILITIES: A Diagnostic Handbook was published and over 500 copies have already been disseminated. The provision of inservice training opportunities has and will continue to be a central component of the project. The project has three overall objectives:

- o To identify procedures which improve the evaluation of learning disabled students.
- o To identify procedures which assist educators in the instruction of learning disabled students.
- o To identify skills and knowledge which special educators need in the evaluation and instruction of learning disabled students.

Staff Development

Staff development is one of the most important avenues to educational improvement. Training pays off in many ways, as successful businessmen will attest. Over 75 percent of the teachers in Maryland have achieved their advanced professional certificate. They are under no legal requirement to upgrade or refresh their skills. In almost every area and level of teaching and school administration changes in society and/or technology place fresh demands upon us to upgrade professional skills.

The SITIP Program described under Project Basic is an important initiative of the Department in staff development.

During 1982, the Department conducted its fifth year of institutes for school administrators. The nine institutes offered highly successful programs on "Increasing Teaching Effectiveness," "Assessing Teaching Effectiveness," "Implementing Special Education Programs," human relations training, and programs in equity in instruction. Academy programs continued to receive outstanding approval from participants. The Department assured follow-up and coaching in all training programs through fall and spring retreats, through a comprehensive grants program, and through LEA systemwide and building level workshops.

Vocational-Technical Education

In 1982 in Maryland over 261,000 students attended vocational education programs offered at all education levels, almost 170,000 of them high school students. Most of them attended programs offered in 159 high schools, 17 vocational technical centers, and 17 community colleges.

For the second year, \$2.9 million in state categorical money were made available to help support vocational-technical education programming efforts. These funds played an important part in assisting 924 classroom teachers improve the delivery and expand the content of 433 programs. As a result, 47,074 individuals enrolled in programs aimed at preparing students to enter and succeed in the labor market.

One way of assuring that vocational education students are provided adequate employment training is by encouraging the use of competency-based

curriculum. Each student enrolled in a competency-based vocational education (CBVE) program is provided instruction which is based solely on the skills, knowledge, and attitudes validated by employers as being essential to get and hold a job in a specific occupation.

The Department is promoting statewide adoption of CBVE as a means of making education more accountable not only to taxpayers but also to the students. Its five year goal was that by 1982, 60 percent of the approved vocational education programs in Maryland would be competency-based. The goal has been met.

Evidence of the impact of this effort can be seen in vocational education settings throughout Maryland. Last year, in Allegany County all students enrolled in consumer education, food and nutrition, and housing and home management programs were being taught by teachers who used CBVE instructional strategies. A consortium composed of Somerset, Queen Anne's, Dorchester, Worcester, and Wicomico Counties on Maryland's Eastern Shore led to the development of competency-based curricula in carpentry, auto mechanics, and electricity. Business education teachers in St. Mary's County changed the total business education curriculum to one that is competency-based. Students graduating from these types of competency-based programs are well on their way toward preparing themselves for employment and advancement in today's competitive labor market.

Making the transition from school to work is not easy for most young people, but it is especially complicated for many of Maryland's 29,042 disadvantaged and handicapped students. Because of their mental, physical, and/or socioeconomic disabilities, these individuals need

an extra boost to succeed in vocational-technical education. To assist these students to learn how to successfully compete in the mainstream of school and the world of work, the Department funded special support services teams throughout Maryland.

In Howard County, the team used numerous techniques to promote the concept that everyone has the right to pursue personal goals by participating in education and employment to the maximum extent possible. By working in concert with other school personnel, the team was able to provide a better understanding of the needs and skill potential of the handicapped and disadvantaged. As a result, 244 students received counseling assistance, academic or behaviorial reinforcement, and extensive personal attention.

In Caroline County, disadvantaged and handicapped enrollment increased by 31 percent in one year.

In Kent County, special needs enrollment was just as positive.

In both cases the increase was attributed to the special support services teams who worked with vocational teachers, counselors, and administrators on a daily basis to provide assistance needed to enhance the educational environment of these students.

Garrett County's support team provided 71 special needs students with in-class assistance, modified curriculum materials, remedial vocational instruction, and academic tutoring in areas related to each student's vocational education program.

During Fiscal Year 1982, Montgomery County's seven teams provided individualized assistance to 952 disadvantaged and handicapped students.

This undertaking increased the vocational enrollment of these students, improved their attitude toward learning, raised their feelings of self-worth, and reduced their dropout rate.

Often students graduate from school with the skills to perform a job without having the ability to seek out employers. To address this problem, the Department funded job placement projects in eight LEAs to teach students the employability skills needed to obtain and sustain employment. Services provided by these projects were directed at assisting over 2,700 students find placement in occupations for which they were trained.

Feedback from follow-up studies on Maryland's high school graduates provide data useful in the planning of vocational education programs. As part of these studies, employers are questioned about their perceptions of vocationally trained employees. Information provided by the employers revealed that vocational graduates are considered to be "exceptionally well prepared" or "well prepared" to meet job requirements. This suggests that the content of vocational courses is sufficient to equip students with the skills, knowledge, abilities, and attitudes valued by employers.

Corrections Education

Record numbers of prison students obtained literacy certification, completed high school programs, and completed vocational programs in 1982—1,371 inmates in all, up from 881 in 1981.

Corrections policy and practices continue to be a major area of concern and debate in Maryland and in the nation as a whole. Economic problems and stricter criminal penalties have combined to stimulate dramatic growth in prison populations.

The Department of Education provided educational and library programs at every major Division of Corrections prison in Maryland. With populations expanding rapidly, services have been extended with larger classes and double school sessions. Program offerings emphasize basic skill development, high school completion, and vocational education.

In addition to expanding enrollments, the programs have continued to stress quality. Each vocational education program received a standardized audit in 1982 involving outside evaluators. Inservice opportunities for staff were provided at an unprecedented level, including an intense youth and adult reading program onsite in Hagerstown from Johns Hopkins University. Also, the national meeting of the Correctional Education Association was held in Baltimore. Supervisors were involved with the Department's Professional Development Academy.

Services for students with special needs are being implemented. Reading labs utilizing certified reading specialists or special education teachers in a partnership with trained inmate aids are operating in three institutions, serving students who may not previously have been able to succeed in available programs. Individual diagnostic and instructional plans address the unique needs and abilities of these priority students.

Through cooperative programs, inmates attend

college in the major institutions and participate in registered apprenticeship programs. College programs have expanded to record enrollment levels but now face a very difficult future with reductions in available federal assistance. Cooperation between vocational education and prison industry programs allows for greater development of an inmate's employment potential. Apprenticeship programs have proven an especially effective mechanism for combining work experience and formal instruction.

Finally, the correctional education program has placed increasing emphasis on employability development as a general objective of correctional education. Activities include occupational information programs, interest assessment, guidance services, career education, competency profiles in vocational education, individualized employability planning, and a new release readiness program stressing job finding and maintaining behaviors. From the reception center to the pre-release unit, MSDE programs are providing inmates with opportunities to learn, grow, and change. These programs are influencing the lives of the many participants and the quality of life for citizens of this state.

Extended Elementary Education

The opening of the state's first Extended Elementary Education Demonstration Center in 1982 at Rodman Elementary School, Baltimore, has helped hundreds of teachers and other staff sharpen their educational skills. The success of the Rodman Center has encouraged the establishment of others, one in Anne Arundel County and one in St. Mary's County. A unique feature of the centers is that they tailor each day's program to the needs of that day's visitors.

In 1982 the General Assembly appropriated \$1.9 million to continue the Extended Elementary Education Program for the school year. Those funds, plus additional funds from other sources, made it possible to implement the program in 55 schools in ten school systems.

Parent participation was a special focus in 1982; that emphasis continues. Parents have been made a part of the educational effort in the extended Elementary Education Program in ways that reach for a true teacher-parent partnership. Home visits by teachers are the rule rather than the exception. Near 100 percent parent turnout for parent-teacher conferences is routine. Parents are recruited for home volunteer work when their jobs make daytime school activities impossible.

Kindergarten and first grade teachers consistently report that children previously enrolled in four-year-old classes in the EEEP schools perform better in both cognitive and social areas of school.

Happily, we now have results of two long-term research projects that were done over fourteen year periods of time that clearly demonstrate not only that gains are achieved through elementary school but that the gains are sustained through the twelfth grade; the studies show at least three things: 1) that program participants achieve significantly better; 2) that fewer end up in special education; and 3) that participation leads to less subsequent disruptive behavior measured by such things as suspensions and expulsions. In Maryland, we now have children in such programs in 57 schools in nine counties and Baltimore City. They involve 2,058 four-year-olds this year.

Basic Skills

This Board is gratified by the continued progress of students in the basic skills as demonstrated by test results. State agency support of efforts by LEAs included continued instructional support of the reading objectives of Project Basic as well as general program improvement assistance. Publications prepared and released during the year that gave support to local efforts included the revised version of the Functional Reading Instructional Guide.

Mathematics in 1982 saw assistance to LEAs directed toward implementation of the functional mathematics graduation prerequisite test and accompanying instructional program. The first functional mathematics test was administered on a no fault basis in the fall of 1982. Publications prepared and released during the year that give support to local program improvement efforts include Functional Mathematics Instructional Guide, Mathematics Program Implementation Model, and Selected Basic Skills Assistance Programs in Maryland

Such progress as we have made in this area must be viewed against the stark reality that our best mathematics and science teachers are leaving their jobs for higher paying ones in industry and that the pipeline of teachers in training for these subjects is all but dried up. We are in serious trouble.

The third "R," writing, also engaged substantial staff time in the interest of helping LEAs comply with requirements in Project Basic. In 1982 we published Writing Appropriate Assistance Models to complement our publications for writing

program improvement. The Maryland Functional Writing Test was field-tested in 1982 for implementation next year. Besides written communication, oral communication also received increased emphasis. The MARDEL Oral Communication Resource Manual K12 was published for state distribution.

Some 8,000 students in Maryland schools last year came out of over 60 linguistic and cultural heritages. They need special help. These students' needs were being met in 1982 in large part because federal funds were available. Federal budget cuts will attenuate these basic services in the future. The 230-odd objectives of Project Basic were published in Spanish, Korean, and Vietnamese during 1982.

Also completed was a resource paper for programs in second language learning in relation to Project Basic graduation requirements.

We see a continuing increase in student interest in foreign language study. More students want to study more different languages. The study of classical Latin is being revived in many local school systems. Some advocates are also pressing for the addition of foreign language as a graduation requirement.

The screening of children in grades K-3 to discover potential learning disorders has been in practice since 1975, in compliance with state law. An extensive pilot program was completed in 1982 involving over 4,000 children in six LEAs, resulting in the development of an effective and efficient screening program which is now in use in all LEAs.

Gifted and Talented

In 1975, when legislation was passed and this Board declared programs for the gifted and talented a state priority, few school systems were providing any special programs for their gifted and talented students. Since then, programs have grown substantially partly as a result of the state's leadership. Last school year all 24 school systems had such programs reaching 40,777 students--89 percent of the estimated gifted and talented population.

The Board has encouraged three major program emphases. These include:

- o Direct services to students through summer enrichment programs.
- o Direct services to local school system staff through professional development.
- o Direct assistance and guidance to local school system staff in planning, implementing, and evaluating services and programs for their gifted and talented students.

The Department provided direct services to 2,600 of Maryland's outstanding students in grades 5-12 through its "1982 Summer Centers Program for the Gifted and Talented." The dramatic growth of these centers since 1976 from 10 to 100 program offerings and from 900 to 2,600 students served attests to its success and popularity. Last summer 5,700 students applied for 2,600 available spaces. The wide range of program offerings included science, humanities, visual and performing arts, economics, social sciences, psychology, creative writing, environmental studies, mathematics, public policy studies, and foreign languages. Based on feedback from parents and students and team program evaluations, these programs significantly and

positively affected students' intellectual and social development. The Department plans to continue offering these excellent programs supported by state funds.

Department staff also worked directly with local school system personnel to improve programs and services for the gifted and talented during the regular school year. Over the last three years the Department has identified exemplary local school system programs and awarded grants to a total of 17 school systems to establish their own professional development centers. These centers include classroom laboratories and seminars which provide teachers and administrators with both practical and theoretical training. Since 1981-82 school year, approximately 2,500 professional staff have received training, while some 3,000 students have been served in the classroom laboratories. School systems have reported this support to be invaluable in accomplishing their program goals and improving instruction for gifted and talented students in regular school programs. In addition to the professional development programs, grants have been awarded for the 1983-84 school year to school systems for developing curriculum that includes differentiation for gifted and talented students.

Direct assistance was provided in planning, developing, and implementing innovative programs for gifted and talented students. Federal funds were made available during the 1981-82 school year by the Department's successful competition for \$120,000 in federal funds (P.L. 95-561). As a result, nine school systems conducted exemplary programs designed to increase educational opportunities for their gifted and talented students. In addition, a publication, "Criteria for Excellence in Gifted and Talented Programs," was developed to provide direction to schools as

they assess and expand their programs. During the development of this publication, considerable training was provided on evaluation skills to gifted and talented program directors across the state.

Adult and Community Education

More than 900,000 adults in Maryland do not have a high school diploma. The Department operates several adult education programs that provide a continuum of services to enable these adults to acquire a high school diploma, that essential qualification for entry into the economic mainstream.

The Adult Basic Education program is federally funded and provides for educational classes in basic literacy, English to Speakers of Other Languages, and functional skill programs. It is offered in all 24 local school systems and in the Department of Corrections; during FY 82 more than 27,000 participants were served; 7,000 were foreign born, an increase of more than 42 percent over FY 81.

Adult General Education, a state funded program dealing with diploma-oriented instruction, supports programs leading to high school credentials or functional skills. Included are pre-vocational skill development, parenting programs, GED instructional programs, and evening high school programs for adults over 21. During FY 82 more than 109,000 Maryland residents participated in these program offerings, a nine percent increase.

Maryland provides three avenues for adults to acquire a high school diploma.

The GED Testing Program—over 8,000 citizens received GED diplomas last year.

The Maryland Adult External High School Diploma Program—operating in five sites saw 450 earn diplomas in this program and enrolled 1,900.

The Evening High School—operating in eight school systems enrolled 3,850 individuals, among whom 768 were over 21.

Community education programs become more important as a declining school age population frees schools for new purposes. But availability of sites has little to do with the enthusiasm the public is expressing for these programs. In Maryland, in 1982, community education took two forms.

School-Community Centers (SCC) are coordinated between local education agencies and parks and recreation programs. These centers operate in schools before and after hours and during the evening and weekends expanding the use of school facilities to the entire community and providing for broad and distinctive leisure and supplementary educational activities. SCC programs are in operation throughout the state. During FY 82 attendance was 2,378,825 with an average cost per attendant of 53 cents. A total of 662 public school facilities were used, 154,000 different people participated.

Multi-Service Community Centers (MSCC) serve as brokering agencies to meet educational and information, career, and job seeking needs of in- and out-of-school youths and adults. MSCCs were located in eight subdivisions in Maryland and served more than 50,000 clients. MSCCs gained

recognition in a national competition focusing on school/county models of cooperation.

The School Volunteer Program has been increasing and expanding resources in the entire K-adult educational system. During 1982, more than 60,000 adult and peer volunteers provided support and services throughout the state.

Guidance and Counseling

This Board approved state standards for school guidance programs in Maryland in 1982—standards which had been piloted in all LEAs. During the spring of 1983 each LEA will begin participating in a triennial standards review process.

In 1982, also, local boards of education were encouraged to develop guidance programs with goals and objectives consistent with those adopted by the State Board in November 1979. The Department is making small program and professional development grants available for that purpose to all 24 LEAs. Whereas only six LEAs had local board approved guidance programs in 1979, all 24 are expected to have them by June 1983.

In 1982 the Department's Counselor Role Statement was completed. Developed with help from the various statewide parent and professional organizations, it outlines five areas of counselor activity: program management, counseling, consulting, appraisal, and information management.

Elementary school guidance received special attention in 1982, with emphasis on prevention of both student alienation and school disruption. A statewide conference, two state publications, and several demonstration projects have been initiated or completed in that area.

It is becoming increasingly clear that school systems need to provide both direct and indirect intervention programs. However, before the long-term preventive programs can be effective, the needs of chronically and severely disruptive students must be more closely addressed.

To help attack the problem of school disruption, the Department has earmarked a portion of FY 83 Disruptive Youth funds to support preventive type school guidance activities at both the elementary and secondary school levels.

Other disruptive youth projects have been developed to meet the needs and resources of individual school systems. These programs differ from one another but may be classified in three groups:

- o Level A (Long-Term Direct Intervention) are located in alternative learning centers in classrooms. They deal with the chronically and severely maladjusted student.
- o Level B (Short-Term Direct Intervention) are alternatives to suspension, providing other options for milder forms of misbehavior.
- o Level C (Indirect Intervention) involves programmatic attempts to prevent disruptive incidents by aiding teachers who deal with disruptive and misbehaving students.

Equal Opportunity

In 1982 the Board supported a wide range of activities to promote sex equity in education. Activities included the development of educational materials and resources for Maryland Women's History Week, a program highlighted in the Council

of Chief State School Officers nationally disseminated newsletter.

Other activities focused on encouraging increased participation by females in mathematics courses and careers. A statewide Math/Science Task Force Report was researched, and "Equals," Math Conferences, were held in several school districts for math teachers and guidance counselors. Several staff development seminars to promote sex equity in vocational programs were also presented throughout the state. The Project on Equal Education Rights reported that Maryland ranked second among all states in the number of female students enrolled in non-traditional vocational programs. An increase was also noted in 1982 for males enrolled in nontraditional courses.

Pursuant to the leadership of the Governor, the State Board adopted a strong resolution on extremism and violence. Staff has emphasized preventive measures with LEAs relative to policy and curriculum infusion.

The Maryland Professional Development Academy institute, Moving from Desegregation to Intergration was first supported by this Board in the summer of 1981. Of all MPDA institutes sponsored in 1982, this offering has had more follow-up percentage-wise than all other institutes.

Board President Joanne Goldsmith keynoted the 1982 Spring Conference of the State's Multicultural Coalition held at Towson State University. The conference theme was Multicultural Perspectives: A Basis for Quality Education. Mrs. Goldsmith emphasized that "Multicultural education is not compensatory." In referring to guidelines published by the American Association of Colleges for Teacher Education she exhorted that "the components of a

complete program should include preparation of student teachers to work effectively with all students regardless of ethnic origin, sex, age, socioeconomic level, or exceptionalities and to teach from a multicultural perspective." Coalition membership includes public education (K-12), higher education, and the state department of education.

The Department, assisted by the Council of Chief State School Officers Resource Center on Sex Equity, conducted a workshop for 29 staff members of Project Basic, Maryland's statewide competency-based education program. The major goal of the training was to intergrate more fully equity considerations including race, sex, disability, and culture into the implementation of Project Basic in Maryland schools. Out of this workshop has evolved a comprehensive equity training model which has received national recognition. As a result, the model will be disseminated nationally.

Social Studies

In 1982 this Board adopted a bylaw requiring K-12 social studies programs in all local school systems. The Department developed a comprehensive set of guidelines for K-12 social studies. It also assisted local systems in implementing the bylaw.

The Board bylaw, adopted in January, established goals and subgoals for K-12 social studies programs in the state. The goals and subgoals were developed by 13 local social studies supervisors who served on a Maryland social studies task force sponsored by the Department.

A publication entitled Social Studies: A Maryland Curricular Framework, developed by the Department, includes a philosophy, program goals

and subgoals, and example ways of assessing and developing social studies curriculum.

Several Department actions were initiated to assist local implementation programs in social studies. The Department awarded competitive grants to Dorchester County, St. Mary's County, Prince George's County, and Frederick County. The Council on Economic Education in Maryland (CEEM), with Department support, conducted summer teacher training programs and developed example classroom activities for teaching K-12 economics. A Global Perspectives Task Force was also established by the Department to assist local school systems in implementing a global perspectives goal contained in the guidelines.

In support of a government goal, a young voter activity tabloid was developed and distributed to approximately 192,000 high school students in Maryland. The Department was assisted in this project by a Voter Education Task Force composed of 12 civic minded organizations from throughout the state.

Chapter 1 (Title 1)

Improvements across the board for all students is the good news about Chapter I (Title I) for 1982. Chapter I is the federal program enacted in 1965 to assist in the education of educationally disadvantaged children.

Grade 2 was up 15 points in reading, 9 in mathematics; grade 3 was up 3 points in reading, 18 points in mathematics; grade 4 was up 5 points in reading, 3 in math; grade 5, up 5 points in reading, 11 in math; and grade 6, 9 points in reading and 4 in math.

Just under \$45.5 million in federal funds was allocated to local school systems by the State Department of Education in FY 82. The funds were used to serve over 63,300 students demonstrating needs in the basic skill areas of reading, language arts, and mathematics.

One of the principal actions behind universal student improvement in 1982, we believe, is better record keeping, better evaluation data, and better use of that improved information. It made possible more precise knowledge of the needs of each child followed by teaching strategies to meet those needs. Technical assistance to local Chapter I administrators by the state staff also played a role, as did generally improved administration of the program by school principals.

In Fiscal Year 1984, Maryland will continue to face serious financial problems associated with Chapter I. From FY 1981 to FY 1983, the allocation to Maryland has declined by nearly six million dollars resulting in a loss of services to approximately 17,000 students. This problem will intensify in Fiscal Year 1984 by the shift from the use of 1970 census data to the 1980 census data. The census count for Maryland will reflect a decline of approximately 13,000 low income children. The drop in the number of low income children has not been demonstrated in the number of students who need the educational services provided by Chapter I. The funding provided by Chapter I, formerly Title I, has never been adequate to serve more than 60 percent of eligible children.

Migrant Education

Educational programs for migrant children were conducted in Caroline, Dorchester, Queen Anne's,

Somerset, Washington, Wicomico, and Worcester Counties. Approximately 900 children participated during 1982 in these programs which emphasized remedial instruction in the basic skills, science, and social studies.

Preschool children were served in three LEAs as a result of agency agreements among the State Migrant Education Program, East Coast Migrant Headstart, and Migrant and Seasonal Farmworkers Association.

The state sponsored the second Delmar Migrant Education Institute at Salisbury State College in June 1982. As follow-up to the institute, two teacher interns from Texas were assigned to summer LEA projects to provide onsite assistance to summer staffs in curriculum development and instructional activities. The interns were provided to Maryland by the Texas Interstate Cooperative Project.

The Department was very successful in coordinating services of other agencies which serve families of migratory children in Maryland. This increased coordination avoided duplication of services and made it possible to provide a most comprehensive program of health, nutrition, daycare, welfare assistance, legal aid, and employment opportunities to migrant families. Notable cooperating agencies were East Coast Migrant Headstart, Migrant and Seasonal Farmworkers Association, Delmarva Rural Ministries, Maryland Departments of Health and Human Resources, and the Governor's Commission on Migratory and Seasonal Farm Labor.

State Funding of Public Education

State funding of public education in FY 82 recognized the urgency of continuing formula and

categorical programs initiated in previous years.

As in prior years, the state experienced in FY 82 a decline in elementary and secondary full-time equivalent enrollments. The state share of Basic Current Expense during FY 82 was provided a maximum increase of eight percent per pupil which raised the base from \$942 to \$1,017 per pupil. This reflected a change in the State Current Expense formula, adopted for the first time in FY 81, to automatically provide statewide increases in cost per pupil in an effort to maintain parity with the Consumer Price Index. Funding for the Basic Current Expense formula was approximately \$388 million. Adoption by the General Assembly of the triennial assessment system together with the six percent deflated base had a bearing on school aid distribution, and the effect of these assessment changes was felt for the first time in FY 82 in the school aid formula.

The Governor in his FY 81 budget submission to the General Assembly recommended that \$2.9 million of Current Expense aid be earmarked for expenditure in vocational-technical education. This was the first time that unrestricted Basic Current Expense money was earmarked for restricted use. The concept of setting aside unrestricted Basic Current Expense money for restricted use was continued in FY 82. This was an effort on the part of the Governor to recognize some of the unmet needs in vocational education.

During the 1981 General Assembly session, the laws regarding the funding of public school transportation were changed. In FY 82, the law provided that each county's funding may increase by the lesser of eight percent or the percentage increase in the private transportation index portion of the Consumer Price Index for the second

fiscal year prior to the year in which the state aid is to be given. Funding for public school transportation amounted to \$91.5 million and represented an increase of 26.1 percent over the funds appropriated by the General Assembly in FY 81.

The state's Basic School Aid Program continued to be supplemented in FY 82 by the Density and Compensatory Aid Programs. The Density Aid Program was funded at a level of approximately \$11.8 million, and the Compensatory Aid Program at a level of approximately \$5.6 million. Density Aid, declined as a direct result of enrollment reductions in that subdivision. The Compensatory Aid Program remained stable.

The Targeted Aid Program which directs funding towards the lowest spending and poorest of Maryland's school systems which make significant effort, was continued in FY 82. The amount of funding remained at \$8 million.

In addition to the formula programs discussed above, the state further recognized the individual learning needs of students and provided the Department of Education with funds to implement and continue programs designed to address these needs.

The Special Education funding formula adopted in 1976 was phased in over a period of five years, becoming fully operational in FY 81. This funding formula is designed to address the excess costs of educating handicapped students, i.e., costs incurred by the subdivisions over and above their average expenditures for all students. Although this formula was intended only as an interim arrangement until program stability could be achieved, no legislative action was taken in FY 82

to change the formula which resulted in its continuation in the amount of \$70 million.

To minimize disruptive behavior of students in the schools, the Department of Education was provided approximately \$.5 million to fund programs to reduce truancy, suspensions, expulsions, and dropouts through the use of specialized counseling and instructional programs designed to meet these students' needs. The program has achieved significant, measurable results.

State funds were continued in FY 82 to expand and extend nutrition programs to needy children throughout the state. The state's supplement to available federal funds amounted to approximately \$4.6 million.

Approximately \$1 million in state funds under the category of Innovative Programs were provided to assist local school systems in the development of career education services for students, to fund projects designed to improve reading skills, and to implement the far reaching Project Basic effort.

The state increased its funding to approximately \$1.9 million for services to four-year-old children under the Department of Education's Extended Elementary Program. Studies have shown that the first five years of life can have a profound influence on a child's future development. The program now operates in 55 schools in 10 subdivisions.

The state provided a funding increase in FY 82 for Adult Continuing Education Programs to enhance the employability of adults who have deficiencies in their ability to read and write the English language. The funding amounted to approximately \$.8 million.

Planned apprenticeship programs are one of the important methods of producing and maintaining a competent and stable labor force, particularly in areas of the skilled trades and crafts. The Department was granted approximately \$.6 million to administer through the local school systems the related technical instruction programs.

In the interest of increasing the utilization of public school facilities during the evening and weekends, the state in FY 82 provided approximately \$1.2 million. Even though this represented a reduction in funding over the previous year, some 668 centers continued to operate throughout the state in all 24 local school systems.

Counties and Baltimore City, all of which have established public libraries, continued to be appropriated an amount of \$5 for each resident of a participating subdivision. This appropriation was intended to fund approximately 40 percent of the cost of operating a minimum public library program, and in FY 82 the appropriation amounted to approximately \$9.1 million. The 1982 General Assembly approved an increase to \$5.67 per capita effective in 1983. In addition to supporting the cost of operating public libraries, the state funded approximately \$3.4 million to provide a State Library Network designed to ensure that major library resources of the state will be readily available to all Maryland citizens.

The state funding for the state aided educational institutions, which include the Maryland School for the Blind, Blind Industries, Maryland Academy of Science, and the Chesapeake Bay Foundation, remained the same in FY 82, with the exception of funding for the Maryland School for

the Blind, which was increased. The total amount of the funding for these institutions was \$6.5 million.

In addition, the state in FY 82 paid the cost of the following three programs: Social Security for teachers amounting to approximately \$64.4 million, retirement for teachers amounting to approximately \$158.4 million, and School Construction amounting to approximately \$153 million.

In *Hornbeck v. Somerset*, the method used by Maryland to disburse aid to education was placed before the state's highest court. In May 1982, the defense, representing the State Superintendent of Schools and other state officials, appealed the decision of Judge Ross at the trial court level that "the present system of school financing is unconstitutional because it fails to provide equal funding on a per pupil basis across the state and, therefore, it must be overhauled." The deputy attorney general and chief counsel for the state contended that the ruling by Judge Ross in May 1981 failed to resolve whether there was a violation of a state constitutional clause. The outcome of this appeal is anxiously awaited; it could have a significant affect on the future funding of public education in the State of Maryland.

Vocational Rehabilitation

During the year, vocational rehabilitation services were provided to 33,917 handicapped people. Fifty-seven percent of the 3,636 clients who were rehabilitated were severely handicapped. FY 82 brought renewed commitment to serve the severely handicapped. A "Priority of Services"

policy and specific budgetary measures were designed to accomplish this goal.

In concert with these efforts, 1982 was a year of extensive program evaluation. Taking aggressive steps to improve the quality of client services, Maryland with the Michigan and Georgia Vocational Rehabilitation agencies, engaged in a national research demonstration project funded by the National Institute of Human Resources. Also, as a result of an internal assessment process the agency initiated a pilot project to improve eligibility determinations for vocational rehabilitation services. Both projects point the way to significant improvements in the quality of services to clients.

The Divisions of Vocational Rehabilitation, Special Education, and Vocational Education have strengthened efforts to jointly serve handicapped people. DVR has established cooperative agreements with 14 local school systems, the Maryland School for the Blind, and several private rehabilitation agencies throughout the state. In addition, a federally supported partnership with industry has been launched with the AFL-CIO to place handicapped clients in competitive employment. And consumers are playing a vital role in the program through the six regional offices and the Maryland Rehabilitation Center's advisory committees with plans in place for the Statewide Advisory Board.

Several special initiatives were also undertaken. The Agency Cooperation in Employment (ACE) Project, piloted by the Maryland Rehabilitation Center, is opening opportunities for employment and independent living for severely disabled persons with cerebral palsy and multiple sclerosis. A unique feature of the project is the incorporation of environmental engineering into all

phases of the client's rehabilitation process. In the interest of serving trauma patients, the agency is pursuing an alliance with the Maryland Institute of Emergency Medical Services. This year also saw DVR assuming responsibility for the legislatively mandated "Attendant Care" program, which provides needed financial assistance to severely handicapped individuals for attendant care services.

The Maryland Rehabilitation Center offers a unique environment for programs for the severely handicapped. The center is one of ten comprehensive facilities in the nation, where nursing, allied health, and rehabilitation services join together to create opportunities for the growth and development of abilities.

Libraries

Major emphasis in 1982 was given to providing state resources and assistance to public libraries and other institutions in plans and actions to implement the goals and objectives of the Maryland Plan for Libraries 1981-1986. Staff assistance and several inservice training opportunities for public libraries focused on the development of long-range plans for improving services to their communities. Sample survey and reporting models were produced for local library use in determining user needs and user response to services provided.

Use of Maryland public libraries across the state continued to increase significantly. According to national data, public libraries in Maryland have the highest per capita use in the United States. The number of books and other materials borrowed from libraries increased from 31,387,271 to 34,621,139, a nine percent increase. The number of registered borrowers also increased by 63,904 to a total of 1,815,489. State aid for

libraries remained stable and local funding showed only slight increases in a few counties. However, the 1982 General Assembly increased the state/local support formula for public libraries from \$5.00 to \$5.67 per capita, effective in 1983.

The State Library Network funding remained stable in 1982 causing reductions in some services of the regional library resource centers and the State Library Resource Center. The statewide microfiche union catalog, MICROCAT, was expanded to include some or all of the holdings of 47 public and academic libraries. Network services were extended to five additional school systems, allowing students and teachers to request materials through the State Library Resource Center.

Bibliographies were completed identifying student materials in "Arts and Physical Education," "Mathematics," "Writing," and "Reading"--all components of Project Basic. Library Media workshops encouraged use of materials with the Microcomputer Pilot Program in Individualized Education Programs in Special Education.

A Task Force on School Library Media Programs was initiated to examine the current status of these programs for students and to make recommendations to the State Superintendent regarding steps necessary for supporting and improving programs. A special emphasis will also be placed on new educational technologies.

"Criteria for Evaluating and Selecting Microcomputer Courseware" was published and distributed to all school library media centers. Plans were developed to build a data base of resources used with students in Maryland schools. This clearinghouse, the Maryland Instructional Resources Network, will provide educators with

information via computer on all types of materials. To further assist school systems in the review of materials a Traveling Materials Collection of over 1,600 print and nonprint materials was collected and circulated to 23 of 24 school systems.

The management of programs was the emphasis for inservice with the school library media administrators. A three-day workshop dealt with budget, staff morale, and other problems. Workshops were also held for nine school systems now participating in the State Library Network. Three school systems agreed to share their professional collections with other jurisdictions.

The State Media Services Center began its fourth year of implementation of Project LIFE, which provides professional materials and information for educators. Major increases of 57 percent in local school system use of the information service have been experienced with a user satisfaction rate of 85 percent of persons being pleased with services received.

Instructional Television

In 1982, for the first time, every equipped classroom in every public school in Maryland could tune in to any Maryland-owned instructional television program it desired at any time of the day. This partial liberation from the broadcast television schedule was accomplished with the distribution of 10,000 video cassettes of ITV programs to Maryland school systems.

Instructional television services to the Maryland school community have been diverse. Four new video series designed and produced by the Department include two consumer education series for secondary students, a 16-program series on

mathematics skills for grades 6-8, and a teacher education course on composition. Published teacher materials support each new series. New productions also included special programs on topics such as assessment, women, and special education and two national teleconferences funded by the United States Office of Education.

A new service provides a Special Programming Hour each week which broadcasts current programming of an educational or culturally enriching nature.

Information in the MITV Catalog/Schedule has now been programmed for the microcomputer, and disks have been sent to Maryland schools for teacher use. Other computer programs to accompany television lessons are in development.

Other Significant Accomplishments

This agency engages in dozens of other activities in giving support to local school systems, school and public libraries, higher education and other institutions, and people. It is impossible to discuss all of them, but there are activities and accomplishments in addition to those already mentioned which are themselves worthy of mention.

The Board heard 54 appeals from decision by local boards of education in 1982, many of them dealing with school closings and teacher dismissals, but also including such issues as due process, first amendment rights, and obligations of the schools to nonresidents. We take pride in the thoroughness and sense of fairness in the way we handled those appeals.

A highly successful alcohol/and other drug education model has successfully enlisted many

different kinds of citizens in the war against alcohol/and other drug abuse. Some 20 state-trained teams totaling about 360 people have themselves conducted seminars at local levels in the three years of program operation. The impact is, therefore, on thousands of Maryland citizens.

Reflecting the multi-lingual nature of our students, the 230-odd objectives in reading, writing, mathematics, and life skills were published in Spanish, Korean, and Vietnamese, with other translations in Greek, Chinese, Cambodian, Laotian, Arabic, and Russian on the way.

A statewide survey showed that people who go to a public library to find a specific book have a 63 percent chance of finding it. That is just seven percent shy of the state goal.

We said last August that the 1,600 minicomputers the staff had counted in public school classrooms had probably grown to a larger

number by the time that number was reported. It has. A press count early in 1983 accounted for over 1,000 computers in the six Baltimore metropolitan school systems alone.

The first year of the federal block grant program was successfully administered with the distribution of \$6.3 million to local school systems and \$1.58 million administered by the state education agency to fund projects in twelve priority areas.

Emphasis on basic skills is paying off in test results in the California Achievement Tests, the Functional Reading Tests, in standardized tests in early childhood programs, and in SATs. We ascribe those improvements to special emphasis given basic skills instruction, including the Project Basic program, but it is a broad enough development to provide satisfaction to the entire community—students, teachers, parents, administrators, and board members.

*Route miles are those miles required to transport school students from home to school and back daily.

^cIndicates approved route vehicles, whether owned or contracted by county.

[#]Includes nonpublic schools pupils transported.

^aSource: Annotated Code of Maryland, 5-203 (a).

^bIncludes expenditures for transportation equipment, but excludes community transportation services and nonpublic, nonhandicapped transportation services.

Total Pupils Transported at Public Expense:
Maryland Public Schools: September 1981
